

Compliance GROWTH

Product compliance that scales with your supply chain

You collect supplier data in a structured way, make declarations robust, and keep rules and changes cleanly traceable. This makes product compliance a reliable building block of your Impact Intelligence. Impact Intelligence means your sustainability and compliance data is reliable enough to drive decisions, not just reports.

Supplier data that comes back

You launch standardized supplier requests, increase response rates, and see status and gaps centrally.

Declarations backed by data

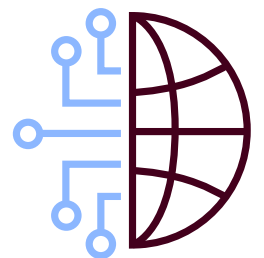

You manage Partial Material Declarations (PMD) and Full Material Declarations (FMD) so reporting, substitution, and regulatory updates require less effort.

IMDS and SCIP become predictable

You work with approved data sets, so touchpoints and exports do not have to be rebuilt every time.

Why now?

Rules change. Bills of materials change. At the same time, supplier data arrives with varying quality and often without clear validity. IPOINTE Compliance GROWTH turns one-off cases into a repeatable process where declarations are versioned, verifiable, and reusable.

Quick start

You begin with a first supplier wave for the most important parts and materials. You define which evidence is acceptable and where placeholders are allowed. You make gaps visible and manage remediation in a planned way, instead of endless follow-ups.

IPOINT

GOOD MADE POSSIBLE

After 30 days

The first requests are running, response rates rise, and status becomes transparent. You see what is missing, from whom and by when, without scattered email threads. IMDS and SCIP requirements become a process, not firefighting.

After 90 days

Rules, checks, and follow-up work together in a repeatable way. IMDS and SCIP touchpoints rely on approved data sets. Changes run through the data set, instead of creating new side lists.

Who benefits fastest from IPOINT Compliance Growth

Compliance and Product Stewardship. A robust request and approval process.

R&D and Engineering
A traceable logic for BOM changes and variants.

Procurement and Supply Chain
Clarity on which suppliers must deliver and where it gets stuck.

How you work with IPOINT Compliance Growth

- + **Run requests and manage data sets** You use consistent supplier requests and see response rates, gaps, and quality centrally.
- + **Review and approve declarations** You validate PMD/FMD traceably, version changes, and establish a clear audit trail.
- + **Manage placeholders** You work pragmatically, but keep placeholders visible with an owner and a remediation date.
- + **Apply rules** You use curated rule groups, for example REACH, RoHS, TSCA, and California Proposition 65, and identify substitution needs and timelines.
- + **Deliver IMDS and SCIP** You serve touchpoints and exports from approved data sets.

What you get

You see what has been delivered, what is missing, and what is approved.

You reduce rework and improve data quality through repeatable rules.

You create the foundation to expand to Scale later, without disruption.
